PROFESSIONAL SUMMARY

Software Engineering student at Injibara University with hands-on experience building AI-powered applications using Python, large language models (LLMs), and machine learning. Focused on applied AI, natural language processing, and computer vision, with a strong interest in building AI solutions for Ethiopian and global challenges. Seeking an AI internship at iCog Labs to work on real-world intelligent systems, learn from experienced AI researchers and engineers, and grow as an AI developer.

TECHNICAL SKILLS

Programming: Python

Machine Learning: Supervised learning, regression, classification, model evaluation

Artificial Intelligence: Large language models (LLMs), prompt engineering, document question-answering, RAG concepts

Computer Vision: Image-based crop disease analysis concepts

Data Science: NumPy, Pandas, scikit-learn

Tools & Frameworks: GitHub, Flask, REST APIs

AI PROJECTS

DocuMind AI — *AI Document Assistant* **Deployed**

- Built an AI-powered application that lets users interact with uploaded PDF documents.
- Implemented document question-answering and summarization workflows.
- Designed a practice-question generator to support learning and exam preparation.
- Explored practical applications of LLMs for document understanding and educational support.

CropCare AI — *AI-Powered Crop Disease Assistant* **Deployed**

- Built an AI application that analyzes plant images to identify potential crop diseases.
- Designed features for disease explanations, treatment guidance, and prevention recommendations.
- Planned multilingual support for Amharic, Afaan Oromo, Tigrinya, and Somali.
- Explored computer vision and AI-assisted approaches to agricultural problems.

Ethio Tutor AI — *Multilingual Educational Assistant* **Deployed**

- Built an AI learning assistant designed for Ethiopian students.
- Developed learning-support features for academic questions, mathematics, and exam preparation.
- Designed multilingual interactions for English and Ethiopian languages.
- Explored LLM applications to make educational assistance more accessible.

EDUCATION

Bachelor of Science in Software Engineering **Expected Graduation: 2028**

Injibara University, Ethiopia

Relevant coursework: Programming, Algorithms, Data Structures, Software Engineering

CAREER INTERESTS

- Artificial Intelligence Engineering
- Machine Learning and Deep Learning
- AI Research

ADDITIONAL INFORMATION

- Passionate about building intelligent systems and AI models.
- Motivated to learn from AI researchers and machine learning engineers.
- Interested in developing AI solutions for Ethiopian and global challenges.
- Prepared to demonstrate and explain AI project work during interviews.
